THIN FILM MODULE

Amorphous Silicon/Microcrystalline Silicon UL listed for 600 volt systems

NA-V135H1

THIN FILM PHOTOVOLTAICS: THE NEXT EVOLUTION OF SOLAR TECHNOLOGY

Sharp's thin film product pairs amorphous silicon with a layer of microcrystalline silicon to achieve high stability and performance. Produced with less than one percent of the silicon used in crystalline solar cells, thin film offers high performance with less semiconductor material. With a low temperature coefficient for output power, thin film generates greater energy than its crystalline silicon counterpart in geographic regions where temperatures are high. In warm climates, this translates into more kilowatt-hours per kilowatt.

Sharp: The first name in solar power. The last word in solar innovation.

Offering one of the most efficient thin film photovoltaic products ever manufactured, Sharp is the provider of choice for multimegawatt-scale power production.

ENGINEERING EXCELLENCE

Tandem junction structure (amorphous silicon/ microcrystalline silicon) captures a wider part of the solar spectrum, converting more sunlight into electricity.

HIGH VOLTAGE ADVANTAGE

Increased number of parallel source circuits improves field reliability.

RELIABILITY

Microcrystalline layer provides superior long-term stability and higher module efficiency.

DURABLE

Four bypass diodes ensure maximum output under non-uniform operating conditions.

INNOVATIVE

Single-layer glass with polymeric backskin lowers the pounds per watt and transportation costs. Modules are sized to optimize the greatest amount of power, and can easily be handled by one person.

1 MW thin film installation in Munich Germany, April 2009

LEADING THE FUTURE OF SOLAR

Since 1959, Sharp has led the solar electric industry with efficient, affordable systems and powers more homes and businesses than any other solar manufacturer in the world. From research and development, to system design, delivery, deployment and a more diverse product portfolio, Sharp is ready to partner with you to create customized solar solutions, with an unyielding commitment to quality control and customer service.

135 WATT

NA-V135H1

Amorphous Silicon/Microcrystalline Silicon UL listed for 600 volt systems

ELECTRICAL DATA	
Maximum power	Pmax
Open-circuit voltage	Voc
Short-circuit current	Isc
Voltage at maximum power	Vpmax
Current at maximum power	Ipmax
Module efficiency	η
Temperature coefficient - open circuit voltage	β
Temperature coefficient - short circuit current	α
Temperature coefficient - power	Υ

NAMEPLATE VALUES	
1	IA-V135H1
	135 W
	249 V
	0.870 A
	188 V
	0.720 A
	9.5%
	-0.3%/°C
4	-0.07%/°C
-	·0.24%/°C

MADE IN JAPAN

The electrical data applies under standard test conditions (STC): Irradiance of 1,000 W/m 2 with an AM 1.5 spectrum at a cell temperature of 25° C. The power output is subject to a manufacturing tolerance of + 10% / - 5%

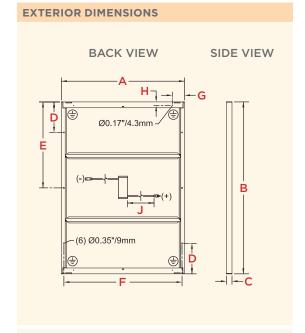

Output values are post initial Stabler-Wronski decay; actual measured initial values will be greater (approximately 15% for power).

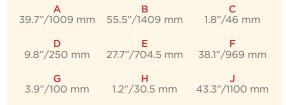

SPECIFICATION	S (I)
Cell	Tandem architecture of amorphous and microcrystalline silicon
Cell Circuit	45 cells in series by 6 in parallel per quadrant: 4 quadrants in series (1080 total cells)
Dimensions	39.7" x 55.5" x 1.8" (1009 x 1409 x 46 mm)
Weight	42 lbs
Connection type	14 AWG Cable with MC-4 connector
Bypass diodes	4 (one per quadrant)
UL Listed	UL 1703
Fire Rating	Class C

SPECIFICATIONS (II)		
Maximum system voltage	600	V_{DC}
Maximum mechanical load	1,600	Pa
Series Fuse Rating	2	Α
Operating temperature (cell)	- 40 to +90	°C
Storage temperature	- 40 to +90	°C
Storage air humidity	Up to 90	%
Installation orientation	Portrait	
Storage temperature Storage air humidity	Up to 90
