THIN FILM PHOTOVOLTAICS: THE NEXT EVOLUTION OF SOLAR TECHNOLOGY

Sharp's thin film product pairs amorphous silicon with a layer of microcrystalline silicon to achieve high stability and performance. Produced with less than one percent of the silicon used in crystalline solar cells, thin film products offer high performance with less semiconductor material. With a low temperature coefficient for output power, thin film generates greater energy than its crystalline silicon counterpart in geographic regions where temperatures are high. In warm climates, this translates into more kilowatthours per kilowatt. Certified to IEC 61646, these modules are not UL-listed and are exclusively for behind-the-fence applications.

Sharp: The first name in solar power. The last word in solar innovation.

Offering one of the most efficient thin film photovoltaic products ever manufactured, Sharp becomes the provider of choice for multi-megawatt-scale power production.

ENGINEERING EXCELLENCE

Tandem-junction structure (amorphous silicon/ microcrystalline silicon) captures a wider part of the solar spectrum, converting more sunlight into electricity.

HIGH VOLTAGE ADVANTAGE

Proprietary design increases reliability by minimizing losses caused by module output variation.

RELIABILITY

Microcrystalline layer provides superior long-term stability and higher module efficiency.

URABLE

Four bypass diodes ensure maximum output under non-uniform operating conditions.

INNOVATIVE

Single-layer glass with polymeric backskin lowers pounds per watt and transportation costs. Modules are sized to optimize the greatest amount of power, easily handled by one person.

The Dayton Power & Light Company, 1.1 MWdc Thin Film

LEADING THE FUTURE OF SOLAR

Since 1959, Sharp has led the solar electric industry with efficient, affordable systems and powers more homes and businesses than any other solar manufacturer in the world. From research and development, to system design, delivery, deployment and a more diverse product portfolio, Sharp is ready to create your customized solar solution, with an unyielding commitment to quality control and customer service.

MADE IN JAPAN

The electrical data applies under standard test conditions (STC): Irradiance of 1,000 W/ m^2 with an AM 1.5 spectrum at a cell temperature of 25° C. The power output is subject to a manufacturing tolerance of + 10% / - 5%

Output values are post initial Stabler-Wronski decay; actual measured initial values will be greater (approximately 15% for power). Illumination of 1 kW/m^2 (1 sun) at spectral distribution of AM 1.5 (ASTM E892 global spectral irradiance)

SPECIFICATIONS (I)		
Cell	Tandem architecture of amorphous and microcrystalline silicon	
Cell Circuit	45 cells in series by 6 in parallel per quadrant: 4 quadrants in series	
Dimensions	39.7" x 55.5" x 1.8" (1009 x 1409 x 46 mm)	
Weight	40 lbs	
Connection type	Cable with MC-3 connector	
Bypass diodes	4 (one per quadrant)	
Fire Rating	Class C	

SPECIFICATIONS (II)		
Maximum system voltage	1,000	V_{DC}
Maximum mechanical load	2,400	Pa
Series Fuse Rating	2	Α
Operating temperature (cell)	- 40 to +90	°C
Storage temperature	- 40 to +90	°C
Storage air humidity	Up to 90	%
Installation orientation	Portrait
